

Teachers simplify communication with SOCS

Between NCLB, AYP, parent e-mails, and publicizing class and school activities, you may feel like communication issues overpower your teaching responsibilities.

How can SOCS help

SOCS—simplified online communication system—is just what the name implies. It's so easy that you or your students can quickly post school-related information that's immediately accessible to parents, students and the community.

Use SOCS to:

- create web-based "teacher pages" that include curriculum, student learning expectations, classroom news, homework assignments and student achievement
- showcase student artwork, poetry, creative writing pieces, and more
- create slide shows featuring pictures of classroom activities, field trips, sports activities and other school events
- encourage feedback from parents on school-related issues
- post important school-required forms that parents can access online
- teach writing and journalism classes
- provide students and parents with an accessible link to your student information system that tracks grades and attendance.

Here's what one teacher has to say about SOCS ...

"We've been getting tons of compliments from parents and students about how cool the new website is! The faculty is very impressed with how easy it is to use. They're already making good use of the site. A few were reluctant to try it because our old site was so bad; but once we get them to try SOCS, they're converted.

The instruction manuals are really easy to follow. You have a great product! Thanks for making our life so much easier!"
